Introduction

This document lists all file names, directories, and subdirectories obtained when downloading MEG Initial Release data from an exemplar HCP subject (012345) from [ConnectomeDB](#). For all other subjects, the filenames are identical except for the subject identifier.

The user may choose to download unprocessed data, processed data and anatomical models for MEG source estimation or any combination of these. Regardless of this choice, all data should unpack to a high level <SubjectID> directory (e.g., 012345/, as exemplified here). If all types of data are downloaded, this high level directory will contain 3 directories (each with various additional subdirectories):

<SubjectID>/ (e.g., 012345/)

release-notes/

unprocessed/

MEG/

The **release-notes/** directory contains text files with release notes for each data type and modality downloaded. These notes are intended to help the user keep track of the version of the data they have downloaded, including the version of the processing pipelines used to generate the files for that modality, and the execution number for that particular run of the pipelines. If downloading the MEG data only for a particular subject, there should only be one file in this directory:

release-notes/

MEG.txt

Section A: Unprocessed Data Directory Structure

All unprocessed data for each subject should unpack to the **unprocessed/MEG/** directory under the <SubjectID> directory:

<SubjectID>/ (e.g., 012345/)

release-notes/

unprocessed/
MEG/

The MEG/ subdirectory signifies that these data were acquired in the MEG lab at SLU. Since all subjects will also be scanned at 3T Connectome Skyra at Wash U, the 3T data will unpack to a 3T/ subdirectory. Some subjects might be scanned at the 7T scanner, for those the data will unpack in the 7T/ subdirectory.

Unprocessed data for exemplar subject 012345 unpacks to the following directory structure:

```

The c,rfDC file contains the raw data, the e,rfhp1.0Hz,COH file contains the head localization data at the start of the scan, the e,rfhp1.0Hz,COH1 file contains the head localization data at the end of the scan, and the config file contains additional header information. Note that the two noise scans (1-Rnoise and 2-Pnoise) do not have head localization data.

EPRIME log files are available in ASCII tab-delimited format (*.tab) and in Microsoft Excel (*.xlsx) format.

Section B: Anatomical models for MEG source estimation

All anatomical models for the MEG source estimation should unpack to a high level <SubjectID> directory for each subject (e.g., **012345/**, as exemplified here) with a MEG/anatomy subdirectory:

<**SubjectID**>/ (e.g., **012345/**)

release-notes/

anatomy/

Besides the coregistration information, the volume conduction model (headmodel) and the source models at different resolutions (sourcemodel3d4mm, sourcemodel3d6mm, sourcemodel3d8mm), the release also contains provenance information (in Extensible Markup Language, i.e. *.xml), quality control figures (in Portable Network Graphics format, i.e. *.png) and provenance information for the figures.

Anatomical models for exemplar subject 012345 unpacks to the following directory structure:

MEG/anatomy/

- 012345_MEGL_anatomy_landmarks.txt

Section C: Channel-level processed MEG data

All channel-level processed MEG data should unpack to a high level <SubjectID> directory for each subject (e.g., **012345**, as exemplified here) with a MEG/ subdirectory for each type of experiment.

<SubjectID>/ (e.g., **012345**)

release-notes/

MEG/

Rnoise/
Pnoise/
Restin/
Wrkmem/
StoryM/
Motort/

Under each of the experimental conditions, the directory structure represents the analysis pipelines that have been executed on the data.

For the empty-room and subject noise datasets, the only applicable pipeline is datacheck. The noise datacheck pipeline results do not comprise a separate package but are included in the packages for the unprocessed empty room data.

For the resting state dataset, the sequence of pipelines consists of datacheck->baddata->icaclass->rmegpreproc->powavg.

For the three task datasets, the sequence of pipelines consists of datacheck->baddata->icaclass->tmegpreproc->eravg for the averaged Event-Related fields and datacheck->baddata->icaclass->tmegpreproc->tfavg for averaged Time-Frequency representations.

Channel-level processed MEG data for exemplar subject 012345 unpacks to the directory structure that is listed below for each of the pipelines. Each of the *.txt, *.mat and *.png data files that are listed below is accompanied with a similarly named *.xml file in the provenance directory, which details the version of the software used to produce the results. These xml files are not listed below, but are present in the release packages.
